

**Dwarf Hinoki Cypress**  
*Chamaecyparis obtusa 'Nana'*

Height: 10 feet

Spread: 10 feet

Sunlight:  

Hardiness Zone: 4b

Other Names: Nana Dwarf Hinoki Falsecypress

**Description:**

A truly graceful garden evergreen, featuring delicate sprays of soft sea green foliage held in horizontal layers along an upward spreading form; a special shrub for both color and texture in the garden, best used as an accent; prefers humid conditions

**Ornamental Features**

Dwarf Hinoki Cypress is a dwarf conifer which is primarily valued in the landscape or garden for its ornamental upright and spreading habit of growth. It has bluish-green evergreen foliage which emerges light green in spring. The scale-like sprays of foliage remain bluish-green throughout the winter.

**Landscape Attributes**

Dwarf Hinoki Cypress is a multi-stemmed evergreen shrub with an upright spreading habit of growth. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Dwarf Hinoki Cypress is recommended for the following landscape applications;

### **Planting & Growing**

Dwarf Hinoki Cypress will grow to be about 10 feet tall at maturity, with a spread of 10 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 70 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
