

Perfect Profusion Salvia

Salvia nemorosa 'Perfect Profusion'

Plant Height: 15 inches

Flower Height: 21 inches

Spread: 21 inches

Sunlight: ☉

Hardiness Zone: 3a

Other Names: Perennial Salvia, Meadow Sage

Description:

A bushy variety producing a profusion of long lasting soft icy blue flower spikes on a perfectly rounded plant; cut back after flowering to promote re-bloom; somewhat drought tolerant; excellent for the sunny border or containers

Ornamental Features

Perfect Profusion Salvia has masses of beautiful spikes of powder blue flowers rising above the foliage from late spring to late summer, which are most effective when planted in groupings. The flowers are excellent for cutting. Its fragrant narrow leaves remain grayish green in color throughout the season.

Landscape Attributes

Perfect Profusion Salvia is an herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Perfect Profusion Salvia is recommended for the following landscape applications;

Planting & Growing

Perfect Profusion Salvia will grow to be about 15 inches tall at maturity extending to 21 inches tall with the flowers, with a spread of 21 inches. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Perfect Profusion Salvia is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
