

Cumulus Allegheny Serviceberry
Amelanchier laevis 'Cumulus'

Height: 25 feet
 Spread: 20 feet
 Sunlight: ☉ ●
 Hardiness Zone: 4a

Description:

A small tree with showy white flowers in early spring and brilliant fall colors, and good growth habit; a great choice for the small home landscape

Ornamental Features

Cumulus Allegheny Serviceberry is clothed in stunning clusters of white flowers rising above the foliage in early spring before the leaves. It has dark green deciduous foliage. The oval leaves turn an outstanding tomato-orange in the fall. It produces blue berries in late spring.

Landscape Attributes

Cumulus Allegheny Serviceberry is an open multi-stemmed deciduous tree with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds to your yard. It has no significant negative characteristics.

Cumulus Allegheny Serviceberry is recommended for the following landscape applications;

- Accent
- General Garden Use
- Naturalizing And Woodland Gardens

Planting & Growing

Cumulus Allegheny Serviceberry will grow to be about 25 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more. While it is considered to be somewhat self-pollinating, it tends to set heavier quantities of fruit with a different variety of the same species growing nearby.

This tree does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
